

MARIANO MARCOS STATE UNIVERSITY

EDUCATIONAL PROGRAMS ON ECOSYSTEMS

Mariano Marcos State University offers the Bachelor of Science in Forestry and the Bachelor of Science in Environmental Science programs, both designed to prepare individuals for careers in the forestry and environmental science profession. The programs seek to cultivate forestry professionals who are both competent and ethical in promoting the sustainable management of forest resources and ecosystem services. Additionally, the environmental science program aims to produce graduates who can pursue careers as environmental officers, research specialists, environmental scientists, educators, quality controllers, and environmental planners.

The program's curriculum provides students with opportunities to explore various ecosystems through fieldwork activities, aimed at enhancing their knowledge and skills in ecosystem management, conservation, and protection. To support this, laboratory facilities outside the university are designated for these practical experiences.
