## 7.2.5 University Measures Towards Affordable and Clean Energy

The Energy Power Generation and Utilization Policy of the University includes a provision for the regular auditing of energy usage across all centers, colleges, and units. Auditors from the Energy Management Committee conduct thorough and spontaneous audits to monitor energy usage patterns, identify non-functional equipment, track kilowatt-hours consumed, and assess the types of devices installed in each building. This data is invaluable for identifying malfunctioning equipment and detecting instances of energy wastage, enabling targeted improvements and further supporting the university's energy efficiency goals.
