

MARIANO MARCOS STATE UNIVERSITY

SDG 2 | ZERO HUNGER

MMSU commits to eradicate hunger by implementing academic, research, development, and extension programs that promote sustainable agricultural practices and food products development. MMSU partners with Local Government Units (LGUs) to strengthen agricultural development for farmers to be trained on corn production, value-adding corn products, and literacy in enterprise development, and providing input assistance such as planting materials to the farmers to improve the quality of life of corn farmers by adopting improved farming technologies. MMSU also commits to share MMSU's developed sustainable practices and innovative technologies in corn farming to foster growth of the Ilocano farmers. At the heart of MMSU's commitment to eradicating hunger are its initiatives in collaboration with other development agencies. Its approach focuses on developing sustainable farming practices to increase agricultural productivity, deploying these to the grassroots. The university further supports the development of low-cost food products with high nutritional value, ensuring that people are not only fed but provided healthy food options.
