

MARIANO MARCOS STATE UNIVERSITY

SUSTAINABLE CAMPUS DEVELOPMENT PLAN

To support the development of facilities as outlined in the LUDIP of MMSU – green spaces (e.g. on-campus parks and gardens) and porous ground of the university are maintained to ensure the balance between development and the natural environment.

The sustainable campus landscape of MMSU is creating a model to showcase efficient designs for open space, landscape and facilities. It also showcases other opportunities for sustainable planning such as the designation of specific sites on-campus for renewable energy production and met-zero roadmap.
